

EDARAN IT SERVICES

successfully appraised for CMMI Level 3.

Another Step Towards Excellence

Edaran IT Services was successfully appraised for CMMI - Level 3, a recognition sanctioned by the Software Engineering Institute of the Carnegie Mellon University of Pittsburg, U.S.A. in August 2008.

The Company embarked on the CMMI programme with a view to improving its business and organisational processes so as to improve the Company's overall efficiency and proficiency.

"As an IT solutions and services provider, we recognize the critical need for a high level of integrity in our products and services. To achieve that, it is imperative that the processes at every stage of our activities are fully effective because, ultimately, the quality of our products and services is dependent on the quality of the processes we use to acquire, develop and maintain them," said EDARAN Managing Director, Dato' Bistamam Ramli.

"For that reason, we embarked on the CMMI route with the primary objective of improving our software engineering and delivery processes so as to raise the overall level of Edaran IT Services' proficiency and the quality of our

products and services, added Dato' Bistamam.

The Capability Maturity Model® Integration (CMMI) is, in fact, a process improvement approach that provides organisations with the essential elements of effective processes. It provides the latest best practices for product and service development and maintenance. CMMI helps integrate traditionally separate organisational functions, sets process improvement goals and priorities, provides guidance for quality processes and provides a point of reference for appraising current processes.

Having been successfully appraised for CMMI Level 3, the Company will use the CMMI approach to guide its process improvement across projects, internal divisions and the entire organization and link management and divisional activities to the Company's objectives.

With professionally and internationally recognised certification such as this, Edaran IT Services moves itself further up the competency curve and places itself on a more competitive platform in the industry.
